

# Feature Specification: Talent Profiles for Job Seekers

workway.dev/@username | workway.dev/@johndoe | workway.dev/@websujal

## SUMMARY

---

The feature requires authentication, backend APIs, database schema updates, frontend implementation, file uploads, and profile management capabilities. The experience should align with the existing Workway design system while presenting candidate information in a modern, premium, and recruiter-friendly format.

## OBJECTIVES

---

- Enable authenticated users to create and manage a professional public profile. - Allow employers to quickly evaluate candidates through a structured, visually appealing talent page. - Improve discoverability through searchable profiles and category-based filtering. - Provide users with complete ownership over profile visibility and updates. - Support future enhancements such as profile analytics, endorsements, featured candidates, and application tracking.

## CORE REQUIREMENTS

---

Authentication & Access Control - Only authenticated users can create or edit talent profiles. - Each user can own exactly one talent profile. - Public profile pages must be viewable without authentication. - Username uniqueness must be enforced globally.

Permissions - Guest: View public profiles - Authenticated User: Create, edit, publish, unpublish own profile - Admin: Moderate, hide, feature, or remove profiles

## PUBLIC PROFILE URL STRUCTURE

---

Generate SEO-friendly profile URLs: workway.dev/@username

Username Rules - Allowed characters: letters, numbers, underscores - Length: 3–30 characters - Case-insensitive uniqueness - Reserved keywords should be blocked Examples: admin, jobs, api, support, login

Username changes should support automatic redirects from previous URLs.

## TALENT PROFILE STATES

---

- Draft - Published - Offline - Suspended (admin only)

Users should be able to toggle visibility without deleting their profile. Published profiles appear in the Talent Library. Offline profiles remain accessible via direct link only if configured.

## PUBLIC PROFILE LAYOUT

---

Hero Section display: - Professional photo - Full name or display name - Professional title - Country and timezone - Local time (calculated dynamically) - Availability status - Member since date - Preferred compensation - Last active timestamp - Quick action buttons: Contact, Share profile, Download resume, Copy profile URL

Example information: - India - 09:06 PM (GMT+05:30) - \$12/hr or \$11,000/year - Active over a week ago

Social & Contact Links: - Public email - Personal website - GitHub - LinkedIn - X (Twitter) Links should open in a new tab.

## ABOUT SECTION

---

Display a rich profile summary describing: - Experience - Technical strengths - Achievements - Preferred roles - Career goals - Unique value proposition

Requirements: - Minimum 50 characters - Markdown support (CommonMark) - Sanitized rendering - Character counter in editor

## PROFESSIONAL INFORMATION

---

Title examples: Full-Stack Engineer, Backend Engineer, AI Engineer, Product Designer Category examples: AI-native Engineer, Frontend Engineering, Backend Engineering, DevOps, Mobile Development, Design Experience Level options: Entry-level, Mid-level, Senior, Staff, Principal Years of Experience: Numeric value with optional "+" formatting (2+, 5+, 10+)

Note: all need dropdown; allow text if no match for title, category.

## AVAILABILITY

---

Status: - Available for hire - Open to opportunities - Not currently available

Employment Types (multi-select): - Full-time - Part-time - Contract - Freelance - Internship

Notice Period: Number of days Available From: Date picker

## COMPENSATION PREFERENCES

---

Support both fields independently: - Preferred hourly rate - Preferred annual salary Examples: \$50/hour, \$100,000/year

Visibility options: - Public - Recruiters only - Hidden

## SKILLS & LANGUAGES

---

Skills: Tag-based input supporting autocomplete, search, custom values. Examples: TypeScript, React, Next.js, Node.js, PostgreSQL, Docker

Languages with proficiency levels: - Native - Fluent - Professional - Conversational - Basic

## TIMELINE-BASED EXPERIENCE SECTION

---

Each entry should include: - Company name - Role title - Employment type - Start month/year - End month/year - Current role toggle - Location (optional) - Description - Key achievements

Support Markdown bullet points and rich text formatting. Highlight metrics automatically (examples: 40% cost reduction, 25,000+ stores powered, 92% payload reduction).

## TIMELINE-BASED EDUCATION SECTION

---

Each entry should include: - Institution - Degree - Field of study - Start year - End year - Current enrollment toggle - Description - GPA (optional)

## CERTIFICATIONS SECTION

---

Each certification should include: - Certification name - Issuing organization - Issue date - Expiration date (optional) - Credential ID (optional) - Credential URL (optional)

Examples: - AWS Certified Developer - Google Cloud Associate Engineer - Meta Front-End Developer

## RESUME MANAGEMENT

---

Allow users to upload resumes in PDF, DOC, DOCX. Maximum size: 2MB.

Public profile experience: - Show a "View Resume" button - Open resume in an in-app modal viewer - Support PDF preview - Provide a download option

## PROFILE CREATION & EDITING EXPERIENCE

---

Users must be able to: - Save as draft - Preview profile before publishing - Publish profile - Unpublish profile - Edit profile anytime

Changes should reflect immediately after saving. Autosave drafts periodically. Display last saved timestamp and unsaved changes indicator.

## TALENT PROFILE DASHBOARD

---

Add this to the current job seeker dashboard. Within Talent Profile: - Edit profile - Preview public page - Copy profile URL - Toggle visibility - Resume management

## VALIDATION RULES

---

Photo: - PNG, JPG, WebP - Maximum 5MB - Professional headshot only

About: - Minimum 50 characters

Username: - Unique - 3–30 characters - Letters, numbers, underscores only

Links validation: - GitHub URLs - LinkedIn URLs - Website URLs - X URLs

Files: - Virus scan uploads - Restrict MIME types

## BACKEND REQUIREMENTS

---

Database Entities: - User (existing entity) - TalentProfile (one row all data; Postgres; free to use jsonb columns)

Note: Some fields like skills and languages and countries etc need dropdown; assist in arranging them.

## API REQUIREMENTS

---

Public APIs: - GET /profiles/:username - GET /profiles/search - GET /profiles/categories

Authenticated APIs: - POST /profiles - PATCH /profiles - GET /profiles/me - PATCH /profiles/visibility - POST /profiles/resume - DELETE /profiles/resume

Nested Resources: - Employment CRUD - Education CRUD - Certification CRUD

## SEARCH & DISCOVERY

---

Talent Library should support: - Keyword search - Category filtering - Skills filtering - Experience level filtering - Employment type filtering - Country filtering - Availability filtering - Compensation range filtering

Sorting options: - Recently active - Newly added - Years of experience - Compensation - Featured profiles

## SEO REQUIREMENTS

---

Generate: - Dynamic page titles - Meta descriptions - Open Graph tags - Structured data (Person schema)

Example title: Sujal – Full-Stack Engineer | Workway

## SUCCESS CRITERIA

---

- Users can create a profile in under 10 minutes. - Profiles are editable at any time. - Public pages load in under 2 seconds. - Recruiters can evaluate candidates without downloading resumes. - The design feels native to the existing Workway ecosystem.
